

Slovakia after SENSOR

what has the Club get out of it ?

EuroRAP meetings, Reykjavík 04/2015

Current situation

- Slovak Clubs are currently not in the position to carry out larger road safety projects
- SATC: lack of financial and staff resources
- SAMS: the same + motorsport oriented
- almost all work has to be contracted → extended administrative burden (procurements)
- pre- and co-financing might be an issue
- to keep the RAP continuum in Slovakia, two new subjects were created in 2015
- **Safe Roads Slovakia and EuroRAP SK**

Safe Roads Slovakia

- January 2015
- civil association of road safety experts
- skilled with all RAP protocols
- fully able to continue the EuroRAP work with an ambition to become an expert member
- cooperation with all relevant stakeholders in SK
- currently preparing RRM and PT 2012-2014
- website under construction

SENSOR Response in Slovakia

- high-ranked representatives of all stakeholders attended the final launch in Bratislava (Nov 14)
- very positive reaction especially of the National Motorway Company (NDS) → interested to repeat the Star Rating late 2015
- access to SENSOR results in ViDA granted to all key stakeholders (MT, NDS, SSC, Traffic Police)
- several press releases (daily newspapers, internet)
- supporting letter for further Projects (SPINE, RADAR) signed by NDS
- MoU signed with the Traffic Police Department (RA data supplier)

Communication

„Some recommendations of the SENSOR project inspired us, others confirmed that things, we already do and plan, are the right ones. National Highway Agency plans in 2015 to install 174 km of safety barriers on the motorways and expressways, with costs over 80 Mil. EUR. Until the end of 2016 we also plan to equip all our motorways with rumble shoulder strips and cut over 10.000 dangerous trees. I am sure, that if we´ll have the possibility to repeat the Star Rating on our network in the near future, the results would be much better“

**Štefan Török, technical director of the Slovak Motorway Company
